Trans. of unidentified mono. received by Academy of Sciences, 10 Jan 42.

The heavy isotype of oxygen was used as an indicator for the elucidation of the mechanisms of certain reactions. The Beckmann transformation of benzophenoxime involves, as intermediate stages, an elimination of oxygen of the oxime and the addition of oxygen of water. Alkali-fusion of sodium benzenesulfonate, β-naphthalenesulfonate and β-anthraquinonemonosulfonate takes place by way of the direct substitution of the group SO_3Na by the ONa group from the alkali. The acylation of ethyl alcohol by acetic anhydride takes place with the elimination of the hydroxyl from the
